Summarized Notes:

Artificial Intelligence (AI) is the simulation of human intelligence in machines . It enables systems to learn, reason, and make decisions . AI is widely used in natural language processing, computer vision, robotics, healthcare, and autonomous systems . It is used in the development of artificial intelligence systems .

Flashcards:

- **Q:** Artificial Intelligence (AI) is the simulation of ?
  A: Artificial Intelligence (AI) is the simulation of human intelligence in machines
- **Q:** It enables systems to learn, reason, and make deci?
  A: It enables systems to learn, reason, and make decisions
- **Q:** AI is widely used in natural language processing, ?
  A: AI is widely used in natural language processing, computer vision, robotics, healthcare, and autonomous systems
- **Q:** It is used in the development of artificial intell?
  A: It is used in the development of artificial intelligence systems

Quiz:

- **Question:** It ____ systems to learn, reason, and make decisions
  Options:
    - and
    - enables
    - systems
    - learn,
  Answer: enables

- **Question:** AI is widely _____ in natural language processing, computer vision, robotics, healthcare, and autonomous systems
  Options:
    - and
    - AI
    - used
    - widely

  Answer: used

- **Question:** _____ Intelligence (AI) is the simulation of human intelligence in machines
  Options:
    - simulation
    - Artificial
    - Intelligence
    - the

  Answer: Artificial

- **Question:** AI is widely used in natural language processing, computer vision, robotics, healthcare, and autonomous _____
  Options:
    - robotics,
    - systems
    - autonomous
    - vision,

  Answer: systems
